Part No. 45-805
Flat Screen Display Power Bridge

Calrad's 45-805 PowerBridge Solution for HDTV is designed as a plug-in electrical device to an existing grounded A/C outlet or surge protector. During installation, there is never any direct contact with electricity or live electrical circuits. NO direct wire branching of electrical wiring to or, from the electrical circuit, back of an existing outlet or house power panel. Direct wired only with UL approved romex between the **POWER INPUT** and **POWER OUTPUT** wall plates.

After the 45-805 electrical wall plates are installed, the **POWER OUTPUT** receptacle is energized by simply plugging in the supplied 36" Power Cord female end to the **POWER INPUT** and the male end to a existing electrical A/C power source, such as a surge protector or nearby existing A/C electrical outlet. **Important:** Check with your local building jurisdiction as to a permit, license or electrical code requirements before installing wire or any outlets into a wall.

In-Home Existing Wall

Specifications

- Max Current Load: 115Vac, 15 Amps
- Wall Plate Color: White
- Romex Cable Length: 6 Ft.
- Male to Female White Extension Cable Length: 6 Ft.
